EDUCATION

University of Maryland, College Park

College Park, MD

B.S. in Computer Science, Minor in Business Analytics

August 2023 - May 2027

- GPA: 3.84, 5x Dean's List
- Coursework: Artificial Intelligence, Machine Learning, Software Engineering, Data Science, Computer & Network Security, Data Structures & Algorithms, Computer Systems, AWS Cloud Computing, Database Systems, Data Modeling & Analytics

TECHNICAL SKILLS

Languages: Java, Python, Javascript, React, Typescript, SQL, Go, Linux, Shell Scripting, HTML, CSS, R, C, C++, C#, OCaml

Technologies: Git, Cursor, Claude, Bitbucket, AWS, Kafka, Figma, Firebase, MATLAB, Terraform, Jenkins, Unity, Rancher

Frameworks: Microsoft Office, Jira, Confluence, Docker, Kubernetes, PostgreSQL, Flask, Postman, MongoDB, Express, Node.js

EXPERIENCE

Software Engineering Intern

May 2026 - August 2026

Rivian *Irvine, CA*

- Tracked **2,000+** carrier exceptions across **8** categories using automated gate-in capture and analytics charts/tables.
- Shipped a compliance dashboard across **~57** Jira issues and **5** prod releases using **TypeScript**, **GraphQL**, and **React**.
- Improved analytics reads by **40%** by removing a **~1,000-row** client cap and migrating to an indexed collection.

Software Engineering Intern

Jan 2026 - April 2026

SpaceX *Hawthorne, CA*

- Pioneered scalable **Python JSON schema** validation framework for mission initiation workflow reliability/data integrity
- Architected 30+ **Flask REST API** endpoints to support CRUD operations on mission services backed by **PostgreSQL**
- Enabled real-time event playback and context awareness by migrating **2** legacy websocket messaging systems to **Kafka**
- Designed and built **3 PostgreSQL** tables for hierarchical data store to link SpaceX and external customer conversations

Machine Learning Engineer

Sep 2025 - Dec 2025

Booz Allen *College Park, MD*

- Vectorizing and chunking **500+** policy documents using **Python**, **LangChain**, and **Qdrant**, enabling semantic search and instant retrieval through an AI chatbot

Software Engineering Intern

June 2025 - August 2025

DIRECTV *New York City, NY*

- Spearheaded an internal dashboard using **Javascript**, **Go**, **SQL**, enabling real-time monitoring of **100+** network rules
- Optimized workflows to reduce manual reporting by **40%** for inventory teams, directly protecting **\$1.5M** annually
- Completed **3-5** weekly DevOps tasks, gaining proficiency on DIRECTV's cloud infrastructure supporting ad delivery

Software Engineering Intern

May 2024 - May 2025

Next Play Games *Lake Orion, MI*

- Launched a mobile contest lobby with **Expo Go**, enabling **500+** daily MLB contests and boosting customer retention
- Developed **5** webpage workflows using **React**, **Typescript**, **PostgreSQL**, ensuring seamless experience across contests
- Optimized **SQL** schedulers, reducing runtime by **30%** and ensuring zero delivery failures for **150+** weekly NFL contests

PROJECTS

Roam | [Repo](#) | *Swift, Google Gemini API, Flask, Supabase*

November 2025

- Won **1st place** (General Track) and **3rd place** overall at UMD GDSC Gemini Hack Night among **150+** participants.
- Built an **iOS** travel app with **SwiftUI** + **MapKit**, processing **100+** geotagged photos via **Flask** + **Supabase**.
- Reduced trip planning from **3 hours** to under **30 seconds** by automating itineraries, flight searches, and recommendations.

NeoVisr | [Repo](#) | *Google ADK, pdfplumber, playwright, React-Native*

April 2025

- Won **1st place** at Bitcamp among **1,000+** hackers for the Moonshot Award.
- Built a RAG advising agent with **Google ADK** over **30+** internal PDFs to automate UMD CS degree audits.
- Reduced advisor response time from **24+ hours** to near-instant by generating audits, emails, and scheduling recommendations.

US Wildfire Analysis | [Repo](#) | *Jupyter Notebook, Pandas, Matplotlib, Git*

Jan 2025 – May 2025

- Preprocessed and analyzed **1.88M+** wildfire records to identify trends and predict wildfire behavior in the U.S.
- Applied hypothesis tests, ANOVA tests, and random forest classification to answer **4** guiding questions.
- Documented a **6-section** overview of our data science pipeline hosted on **GitHub Pages**.
